FAQS

2

What's in the box?

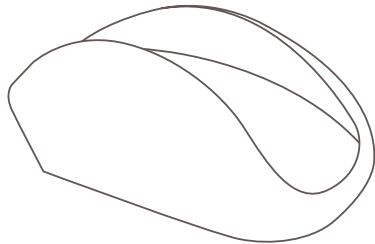

Contents

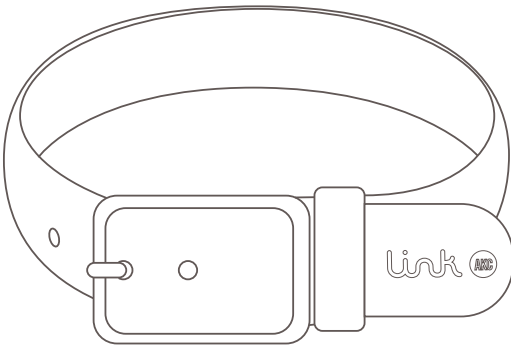

① Collar Carrier

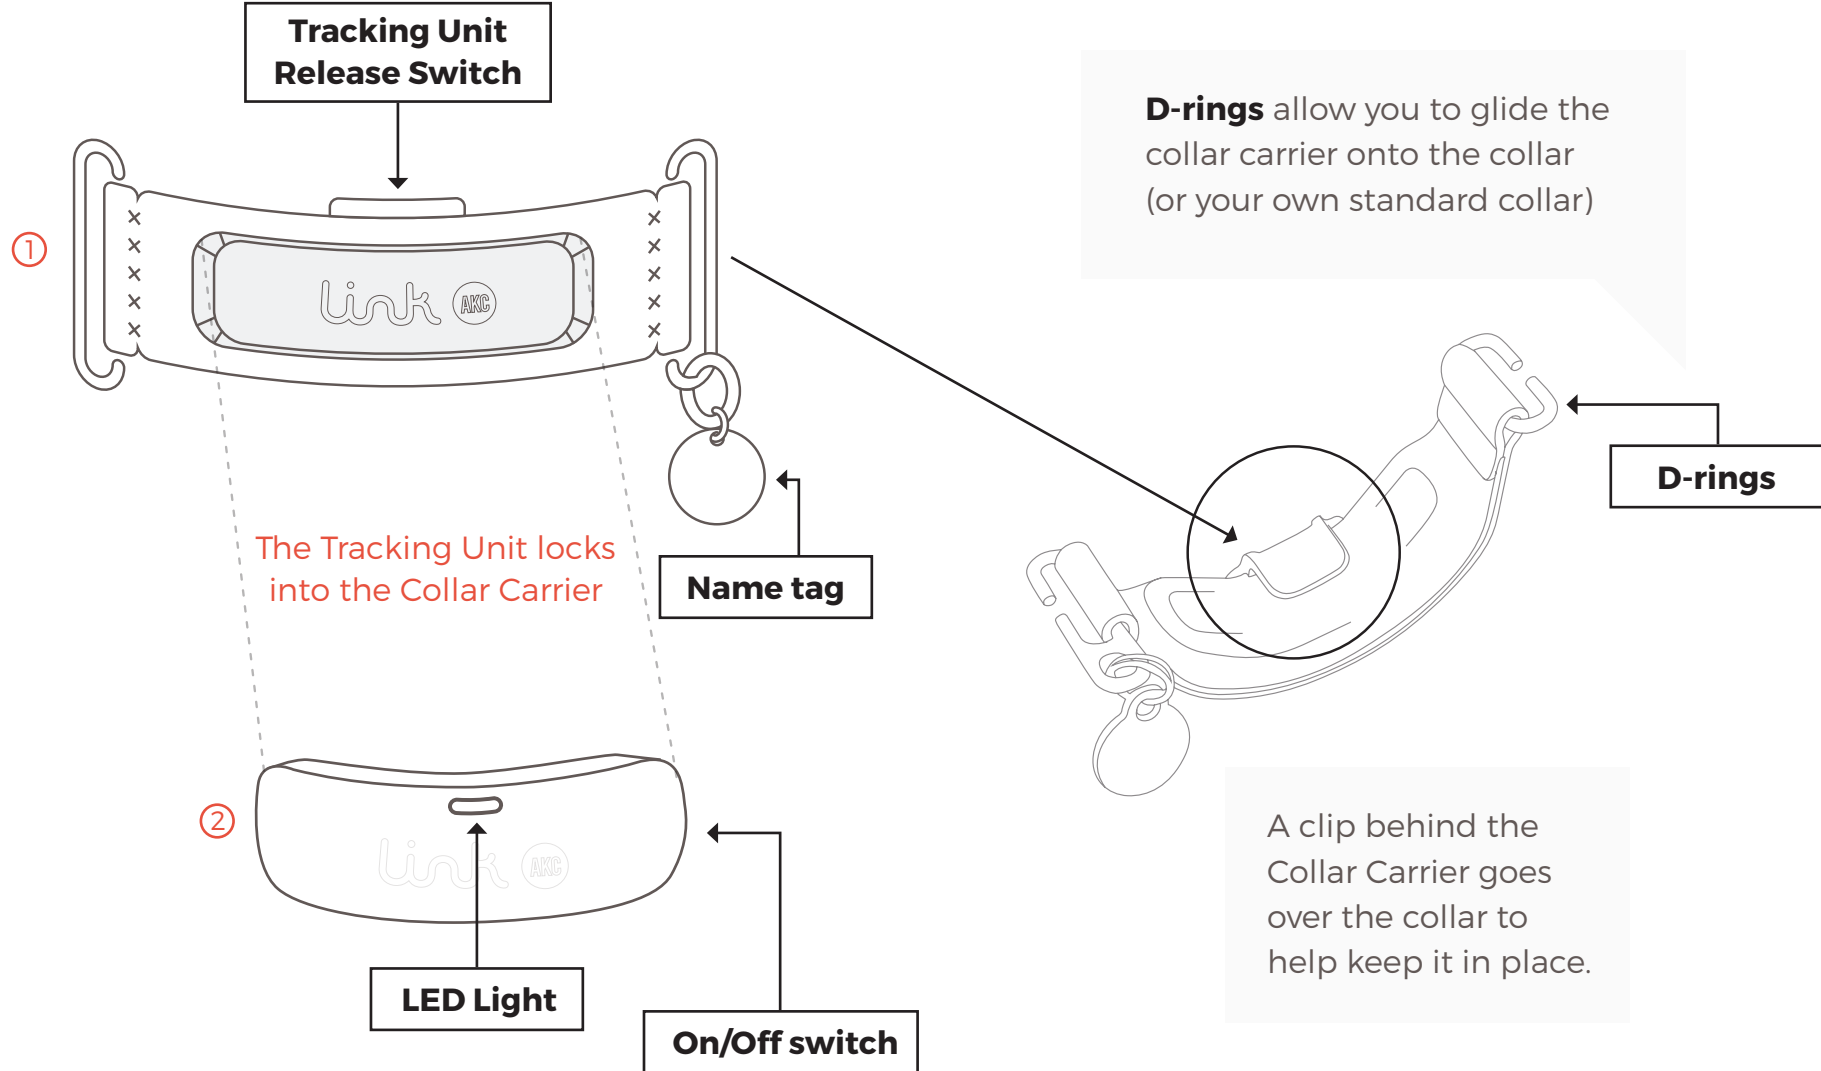

② Tracking Unit

③ Base Station

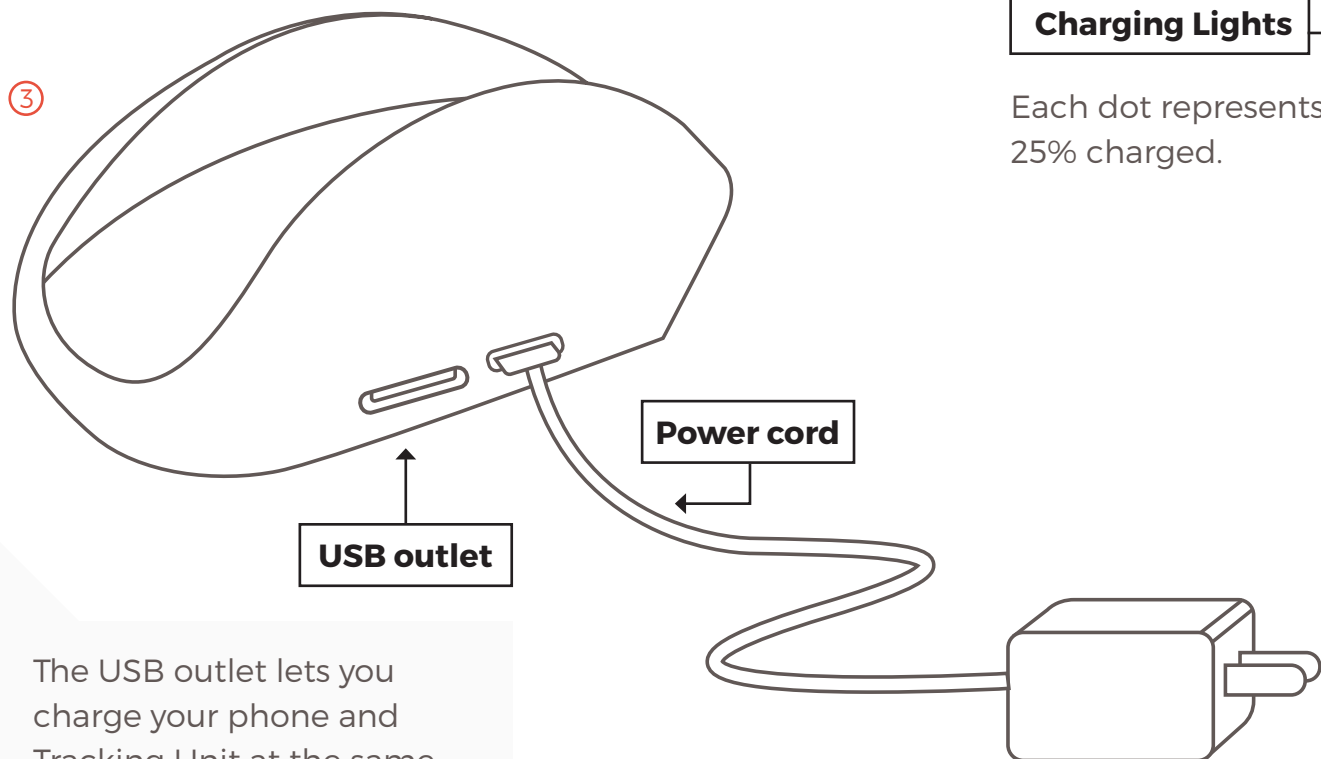

④ Collar

The base station is also your Bluetooth signal so place it near the center of your dogs play area.

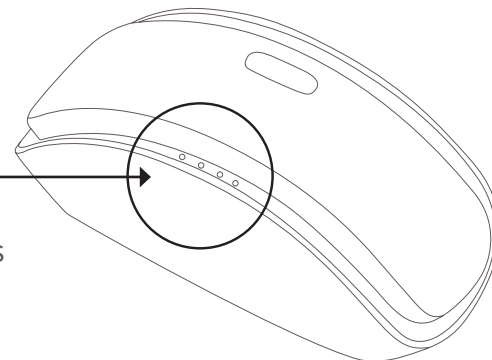

③

The USB outlet lets you charge your phone and Tracking Unit at the same time! *(USB cable not included)*

Charging Lights

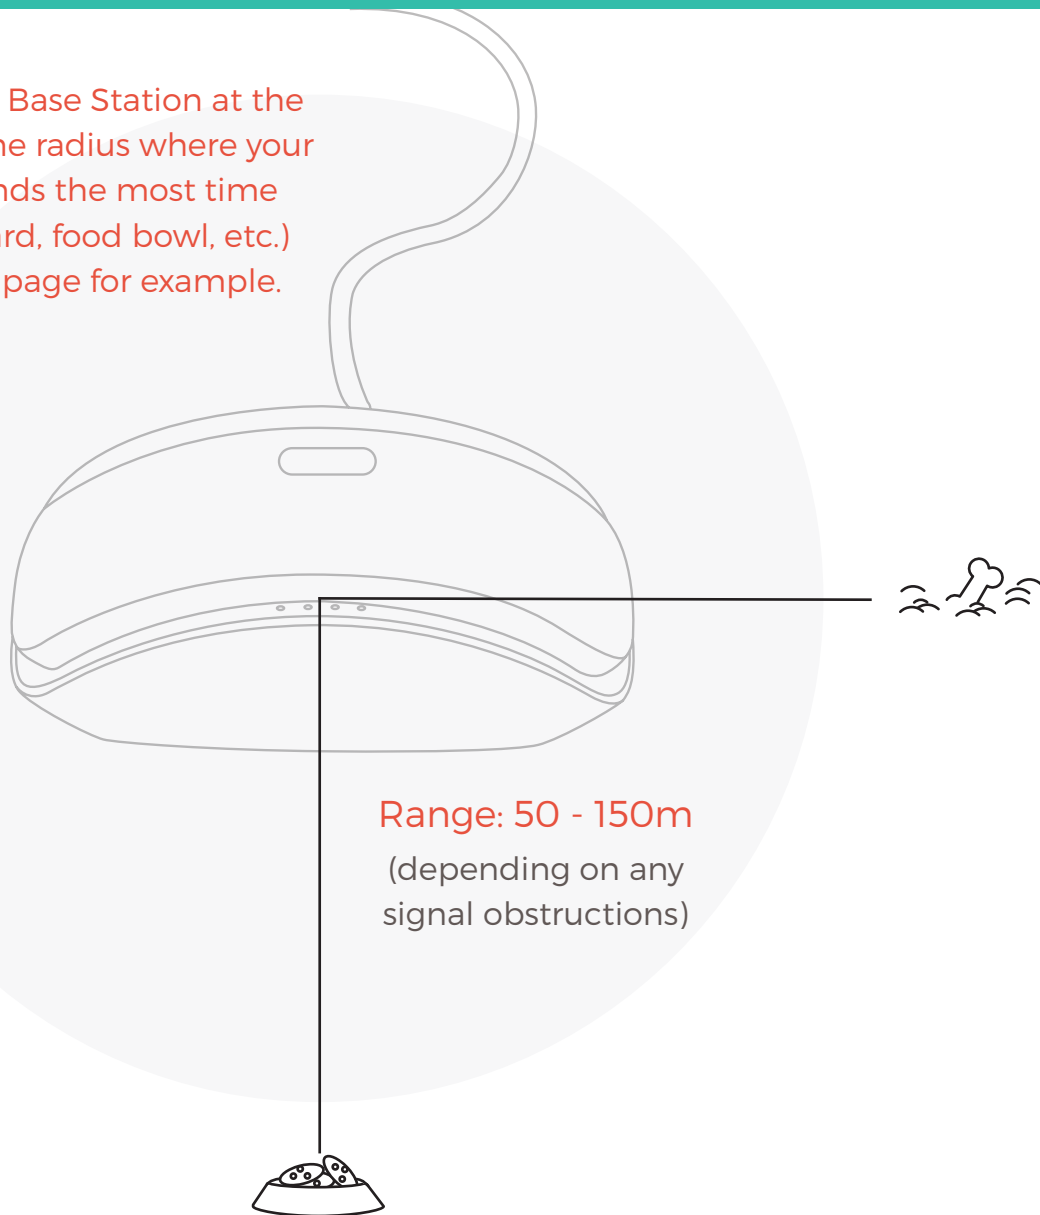

Each dot represents 25% charged.

We recommend charging your Tracking Unit for at least 30 min **before your first usage!**

Gray power cord plugs into the back of the base station and wall.

Place your Base Station at the center of the radius where your dog spends the most time (home, yard, food bowl, etc.)
See next page for example.

Sync your Base Station to your phone:

- 01 Plug in your Base Station.*
- 02 Turn your phone's Bluetooth on.
- 03 Place your phone near the Base Station and find your Base Station ID from the list (the ID is printed on a sticker on the bottom of the Base Station)
- 04 Name your Base Station something that will help you know that your dog is where it should be (home, family room, etc.)

* An unplugged Base Station may generate a false "Away" reading in thinking your dog is on the loose.

Finding the best placement for your Base Station.

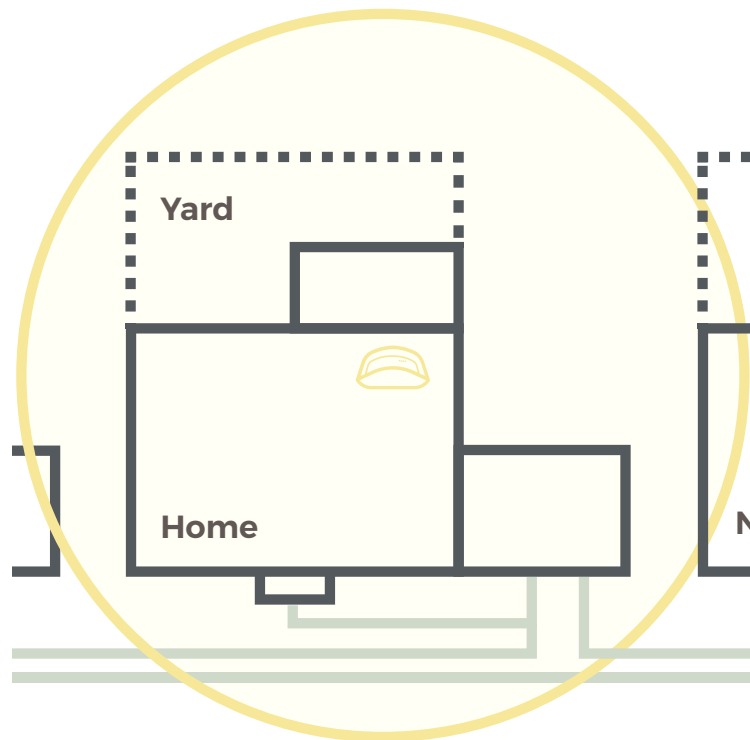

Area covered by Base Station

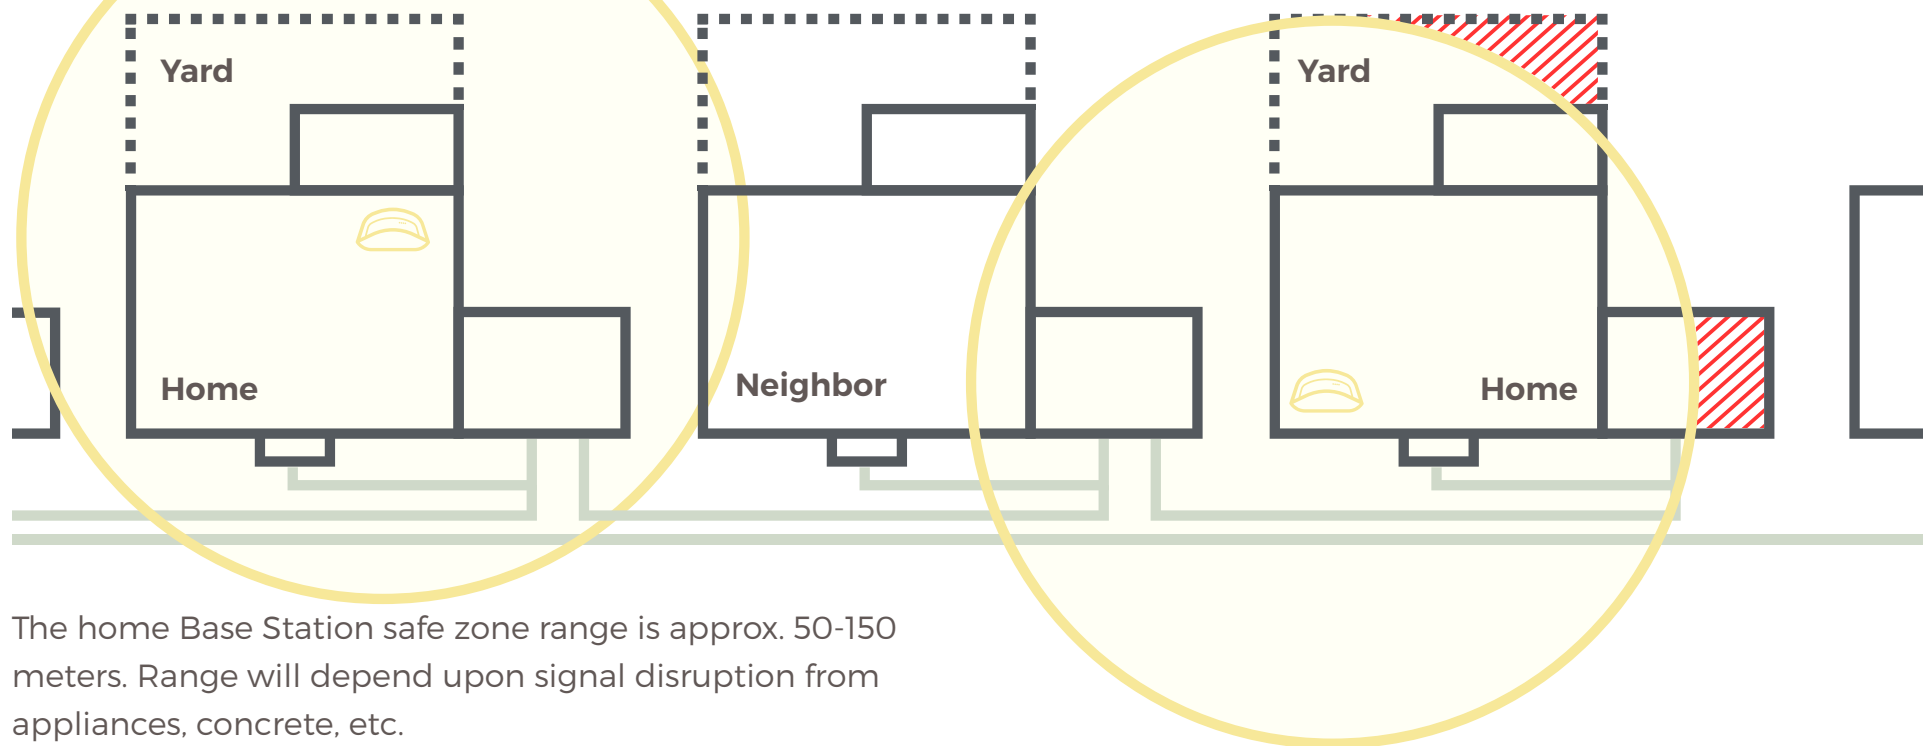

Area not covered by Base Station

Example 1: Best coverage

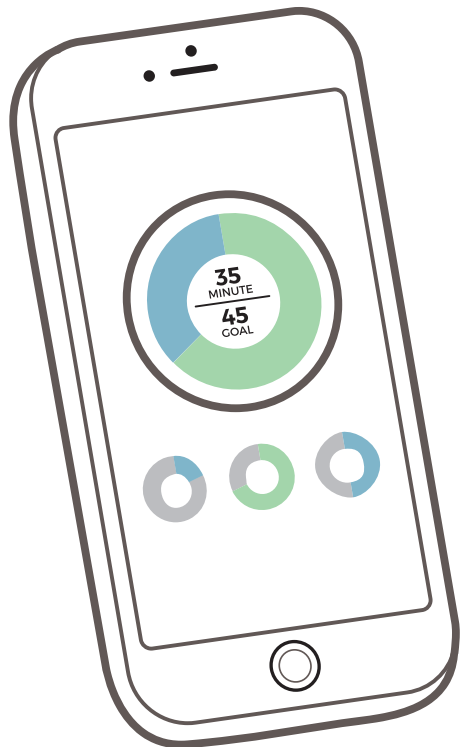

Example 2: Less than ideal

The home Base Station safe zone range is approx. 50-150 meters. Range will depend upon signal disruption from appliances, concrete, etc.

Setting up the app

The app can be
download from:

Apple Store

Google Play

Password ●●●●●

Collars - 1 +

Create your account
and enter how many
collars you are activating.*

Choose your
preferred service
plan for payment.

Service plan:

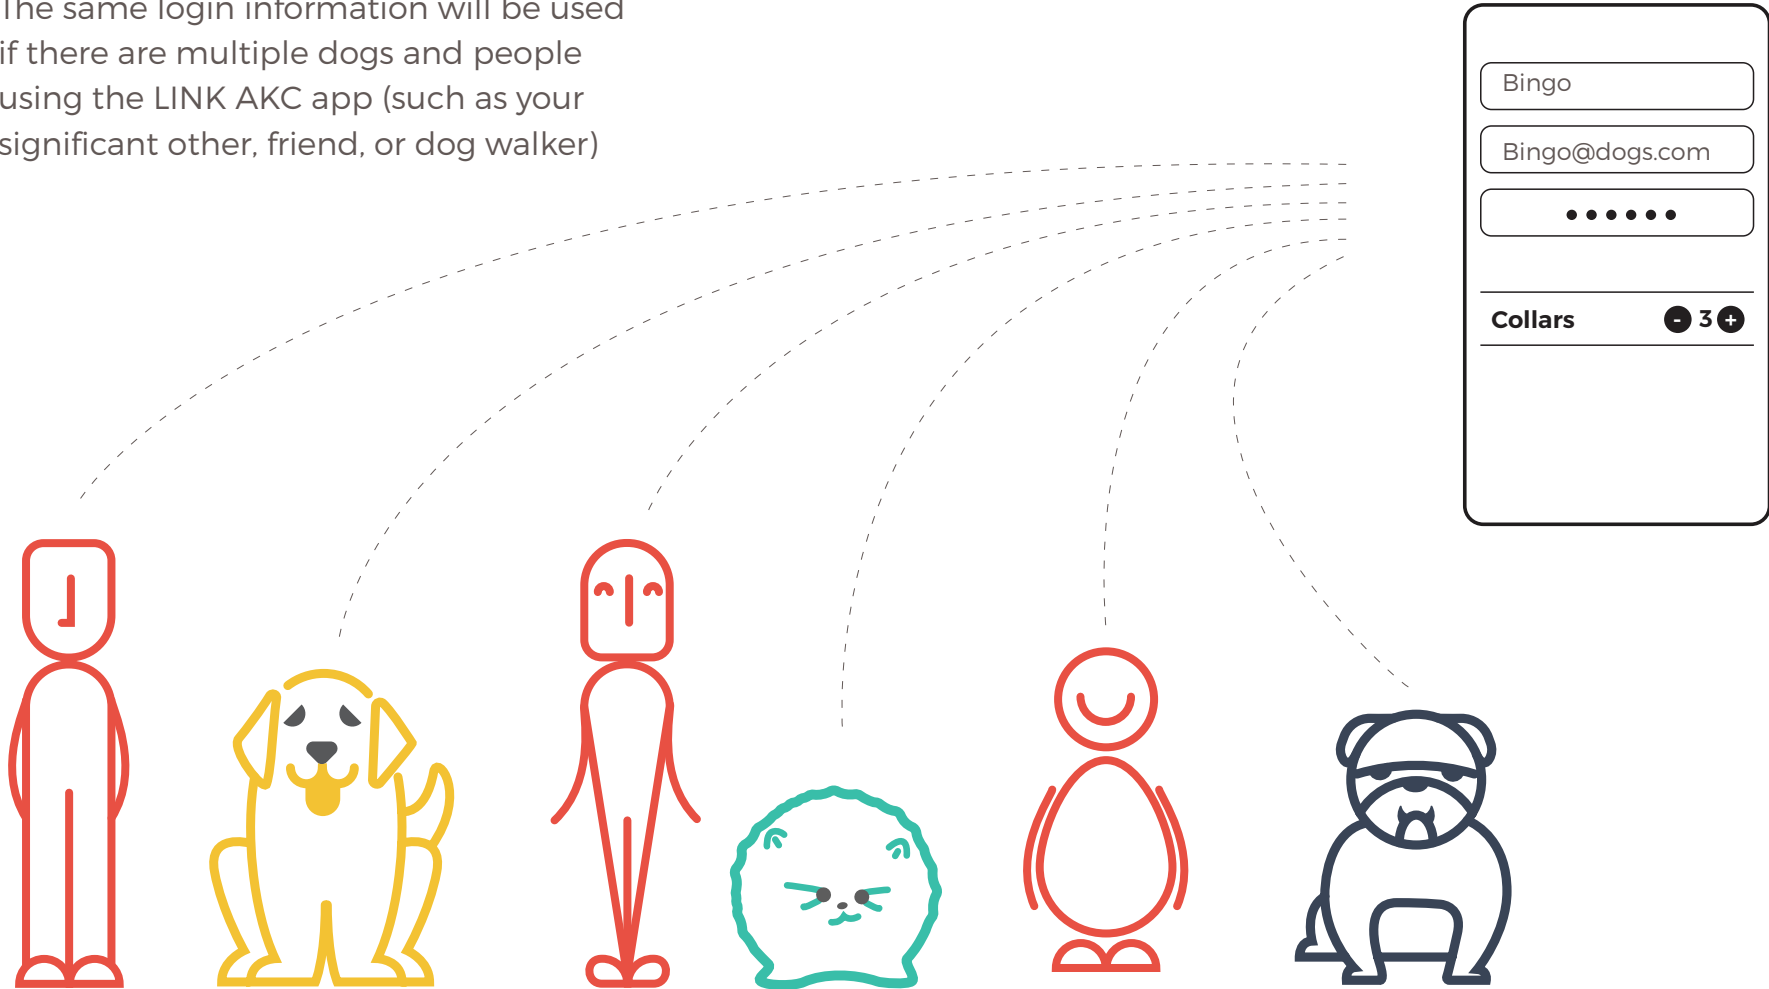

A

B

* Each Tracking Unit will require its own LINK AKC service plan.
For multiple Tracking Units, you will receive a 30% discount on
the service plan.

The same login information will be used if there are multiple dogs and people using the LINK AKC app (such as your significant other, friend, or dog walker)

Customize your app.

Name

Age

Weight

Gender

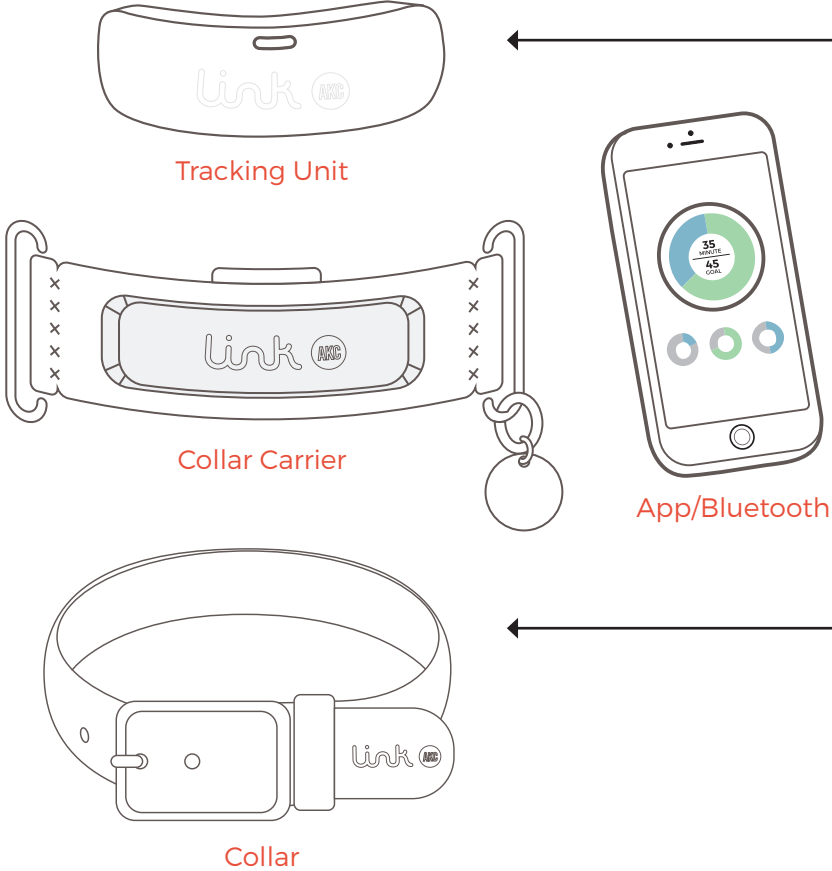

Breed ☒

For mixed breeds,
just tap the toggle.

At LINK AKC, we never share or sell your information. We want to create the best experience for you and your best friend.

While it's not required, entering in your dogs breed or best guess helps our dog experts cater and recommend content for you and your dog.

Activate your collar!

- 01 Turn the Tracking Unit on.
(Make sure your bluetooth is on.
You will hear a series of beeps to
indicate that it's syncing with the
bluetooth on your phone)
- 02 Select your collar ID in the list of
Bluetooth names.
- 03 When you see the light blinking on
the Tracking Unit, your phone will
be synced.
- 04 Place the Tracking Unit in the Collar
Carrier until it clicks and is locked in
place. Then slide it on to the Collar. To
release the Tracking Unit, simply slide
the Switch Release over to unlock it.

**You're now ready to
go out and explore!**

12

How does the collar work?

Data is transmitted to a cellular network (similar to a cell phone) which allows you to know your dog's location, activity levels and environment temperatures.

Why do I need to charge my collar before the first use?

The collar uses lithium ion batteries which are not allowed to be shipped fully charged, but perfectly safe for your furry friend.

How tight should the Collar be on my dog's neck?

The tracking Unit will stay in place on your Collar Carrier so the collar should fit snugly on your dogs neck. Just like most collars, you should be able to fit two fingers between your dog's neck and the collar.

How often should I charge my Tracking Unit?

GPS is battery-intensive, so we suggest charging your LINK AKC every night.

Why is there a service plan?

Service plans are required to communicate with the LINK AKC collar. It enables data to be transmitted from the Tracking Unit to a cellular network which allows you to use features such as the GPS, location & adventures, temperature, and much more.

1. Collar Carrier
2. Tracking Unit
3. Base Station
4. Collar

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) This device may not cause harmful interference, and
- 2) This device must accept any interference received, including interference that may cause undesired operation. Any Change or modification to the product is not expressly approved by Smart pet Technologies and could void the user's authority to operate the device.

This equipment complies with the FCC radiation exposure limits set forth in an uncontrolled environment.

This equipment should be installed and operated with minimum distance 20cm between the equipment and the user's body.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This

equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

Location

Whether your Tracking Unit is charging, in the collar, or near the Base Station. We got you covered.

Link AKC uses:

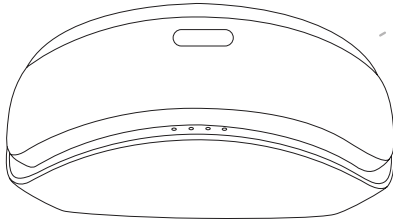

WiFi

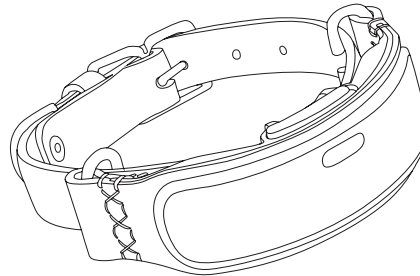

Bluetooth

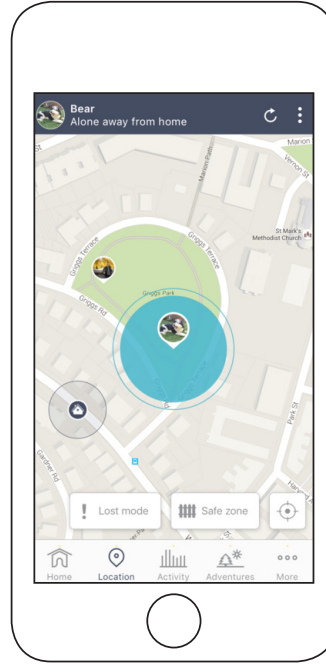

GPS

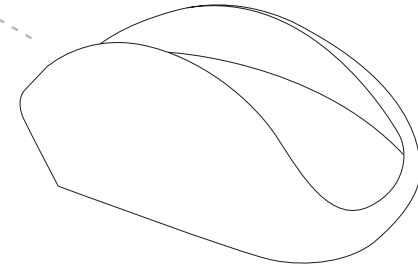

Tracking Unit charging in
Base Station

Tracking Unit in Collar Carrier

As long as you have an active service plan (see FAQs for details), your Tracking Unit is turned on and synced to your smart phone (which should have a cell signal), you'll always be connected to your dog!

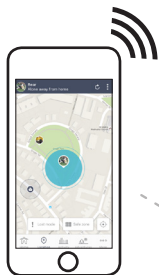

Base Station

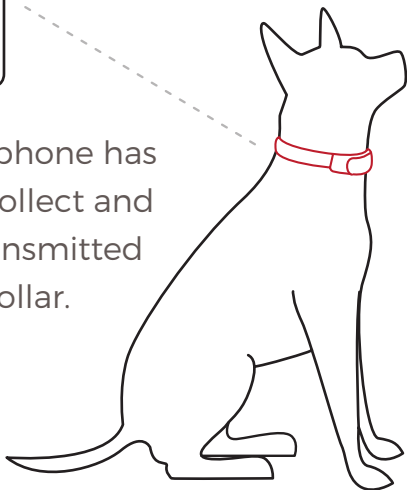

Tracking Unit Range

As long as your phone has service and the Tracking Unit is on and synced to your phone, the GPS/WiFi will be able to track your dog (service plan needs to be active).

Make sure your phone has a cell signal to collect and receive data transmitted from the collar.

Tracking uses Bluetooth to determine if it's at home or away.

Bluetooth

Home

Location has **3 modes** and it's important to understand the differences.

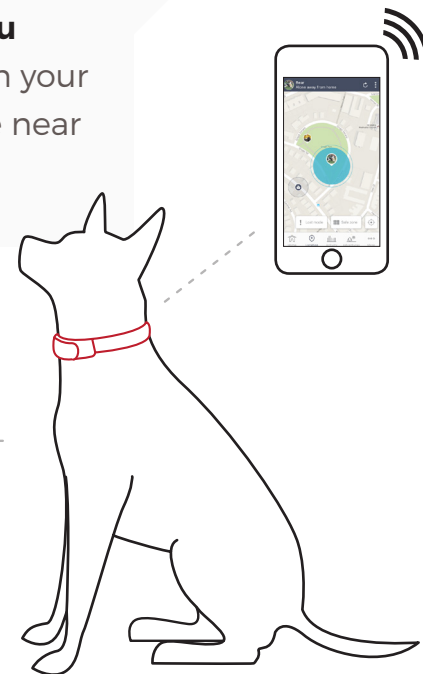

Mode 2: Near Base Station

The Tracking Unit is near the Base Station Bluetooth.

(Base Station Bluetooth range is approx. 50-150m depending on any obstacles. See Getting Started Base Station chart for reference)

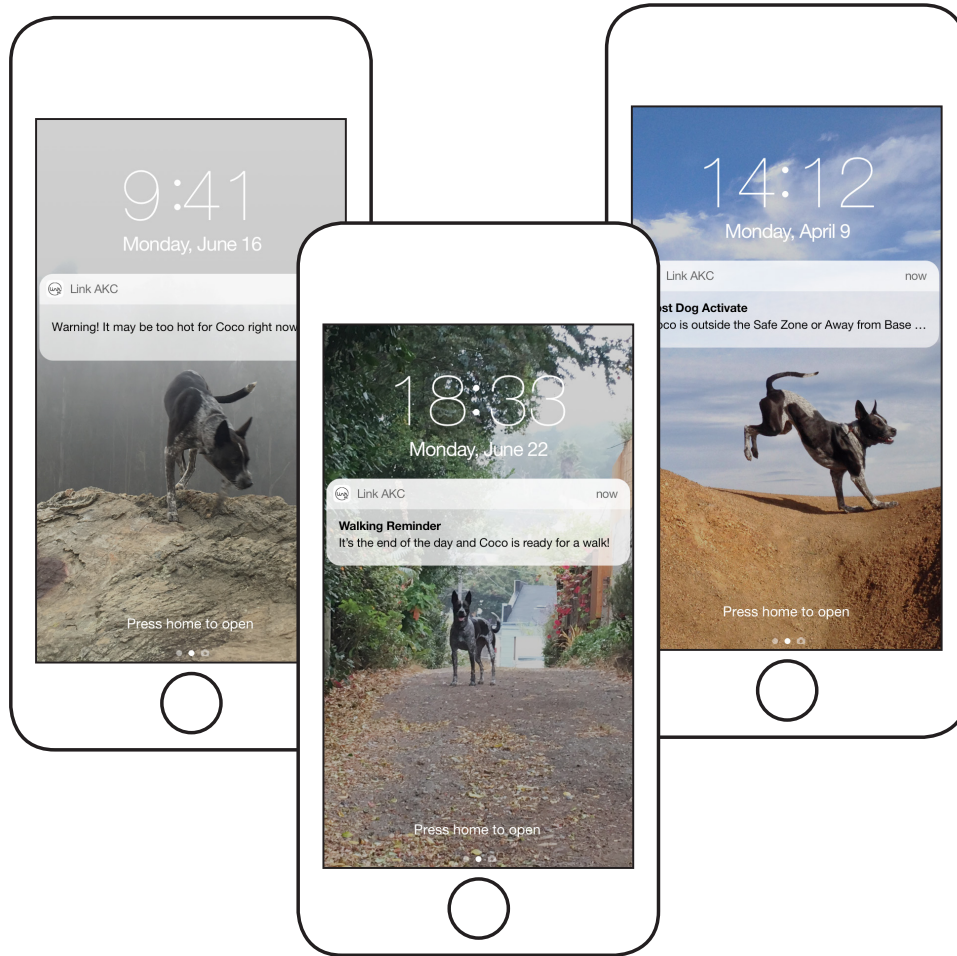

Mode 1: With You

The Wifi/Bluetooth on your phone and collar are near each other.

Mode 3: Away

The Tracking Unit is away from the Base Station and the Wifi/Bluetooth on your phone. This may not mean your dog is lost, but could be with someone who isn't connected to your app. It can however activate a lost dog notification.

This may not be how the notifications appear on your phone depending on model and carrier.

We will notify you if we see something that might need your attention, however you can always opt out of notifications.

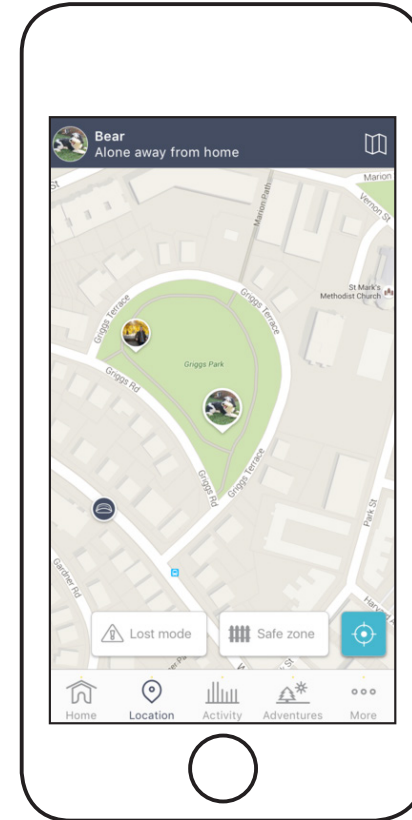

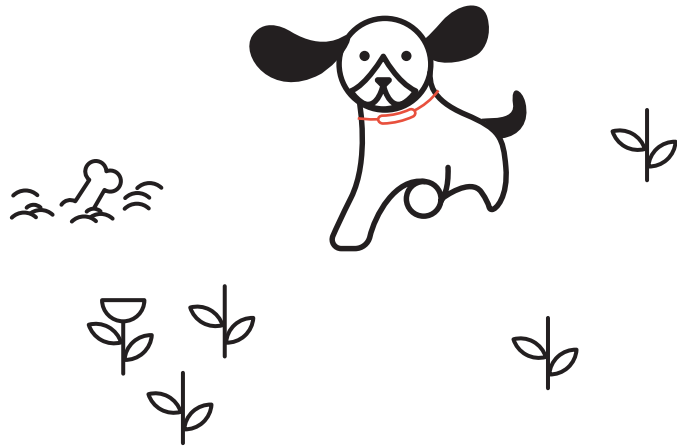

Possible notification triggers:

- Enters/Exits a Safe Zone (exiting will trigger an “Away” mode)
- Lost Dog mode within “Away”
- Temperature is too hot or cold
- Activity level is low

Setting up a Safe Zone is easy especially when you're going off-leash.

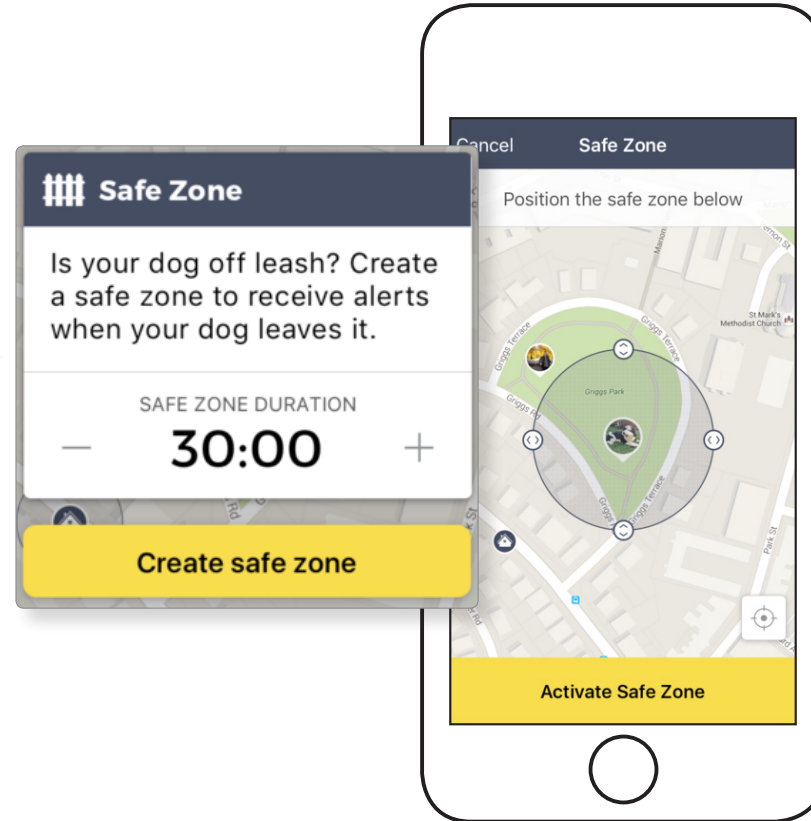

Go to the Location button on the bottom of the home screen. Then select "Safe Zone" in the map.

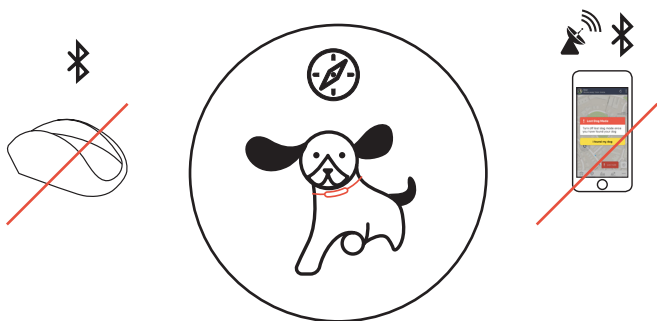

Customize your safe zone range from 10m-2800m by pinching the screen which will create a barrier radius around your dog.

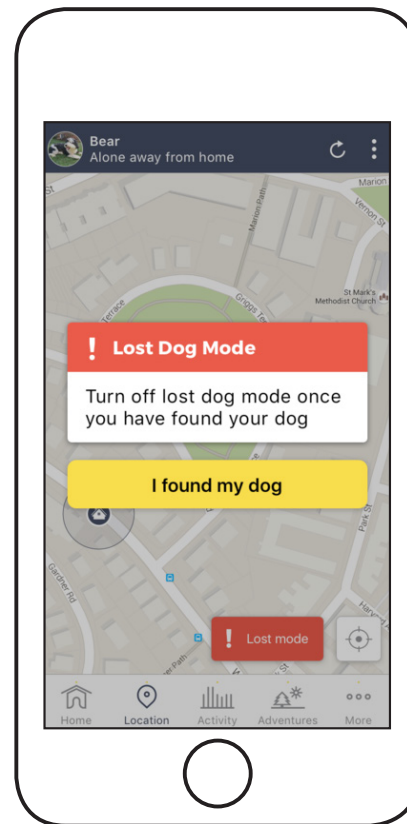

Set your temporary Safe Zone with a time duration. You can always turn this off if your time is cut short.

There's nothing worse than feeling like your dog is lost, which is why we value this feature the most!

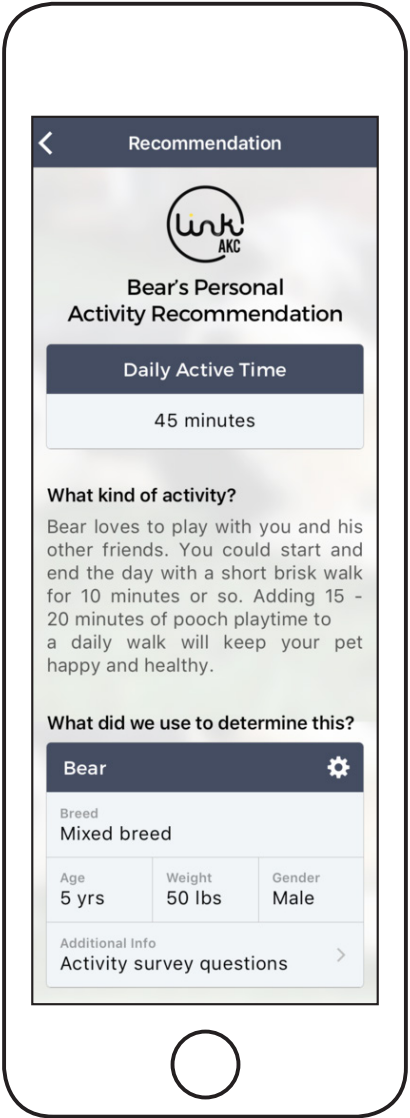

If/When you are in the “Away” mode (Tracking Unit is away from the Base Station and your phone) then you can trigger a “Lost Dog” warning which will activate the GPS to help you find your dog.

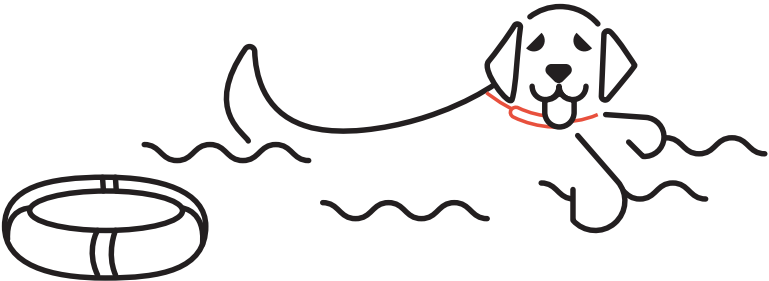

This feature relies heavily on GPS and is extremely battery intensive. We recommend charging your Tracking Unit every night to be sure it's ready the next day.

Activity

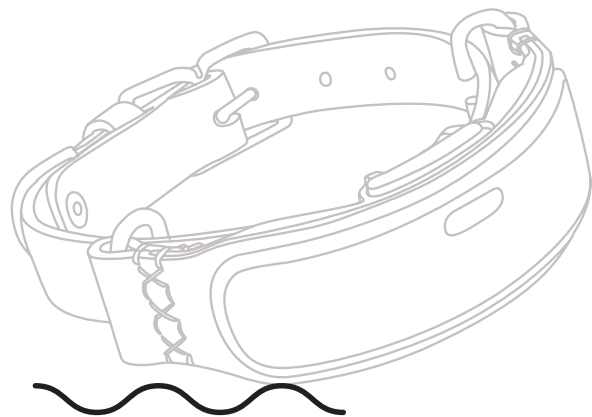

LINK AKC will suggest the appropriate activity level for your dog based on the survey questions you answer when setting up their profile. This helps keep your dog happy and healthy!

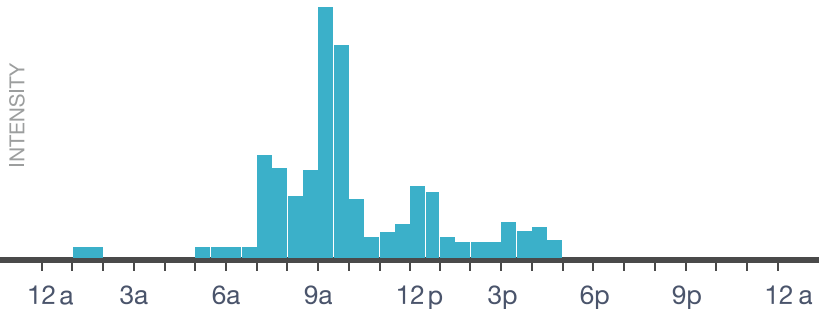

11

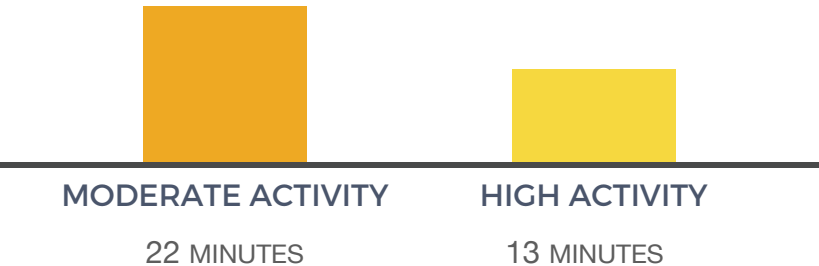

Activity Levels

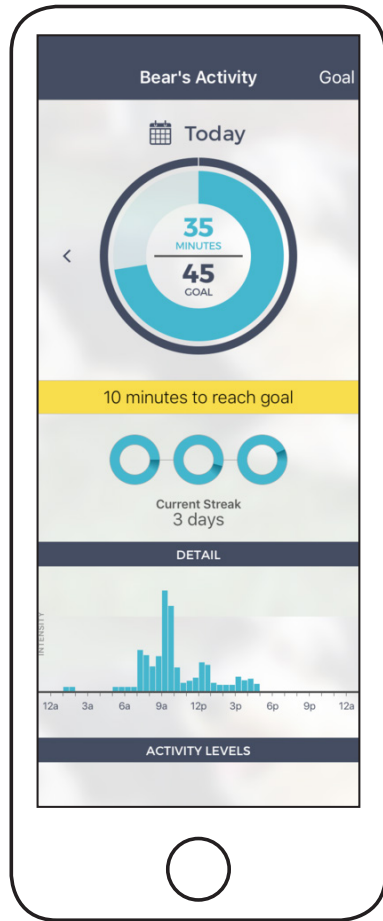

Based on LINK AKCs proprietary three-axis accelerometer on the Tracking Unit, it will begin to measure and learn your dog’s activity levels to help customize what’s best for your dog.

Daily activity is tracked when your dog is wearing the collar and Tracking Unit.

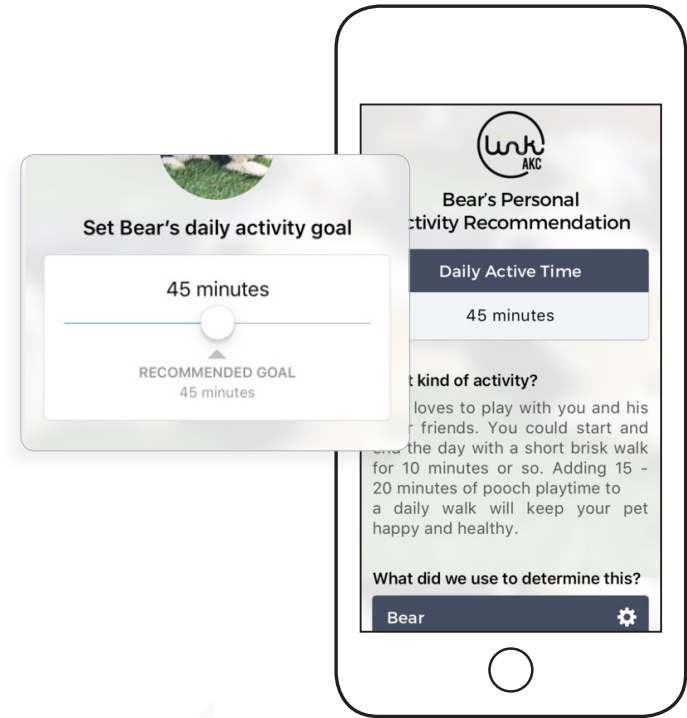

LINK AKC recommends activity level.

GOAL! Consistent activity levels help you reach your dogs daily activity recommendation.

We always recommend consulting a vet if you're unsure or concerned on your dogs activity level.

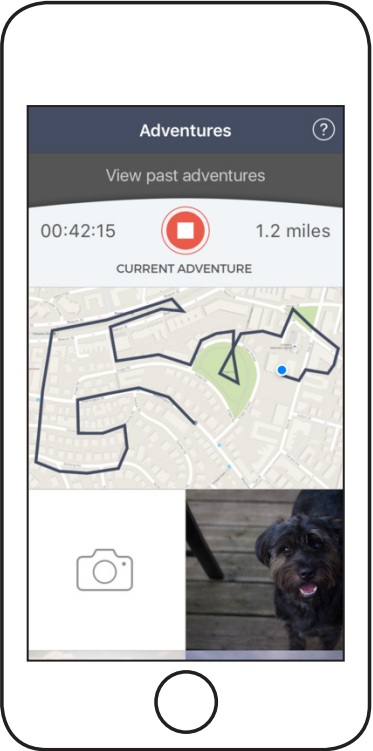

You can manually adjust this at any time by changing the recommended activity level.

Adventures

Record, save, share

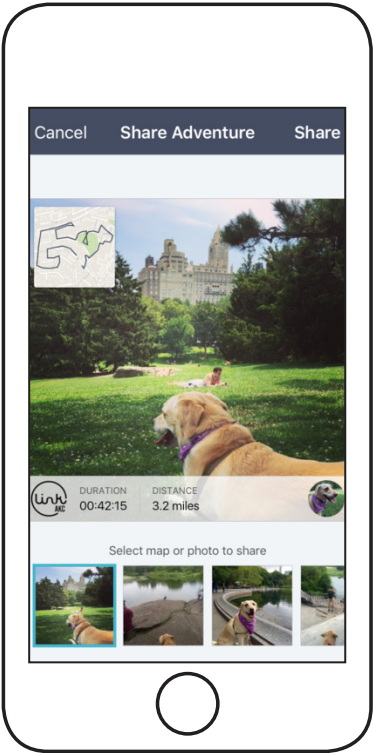

Record

Starting a new adventure
maps your route

Save

Take pictures and videos
along the way and save the
route to revisit it again

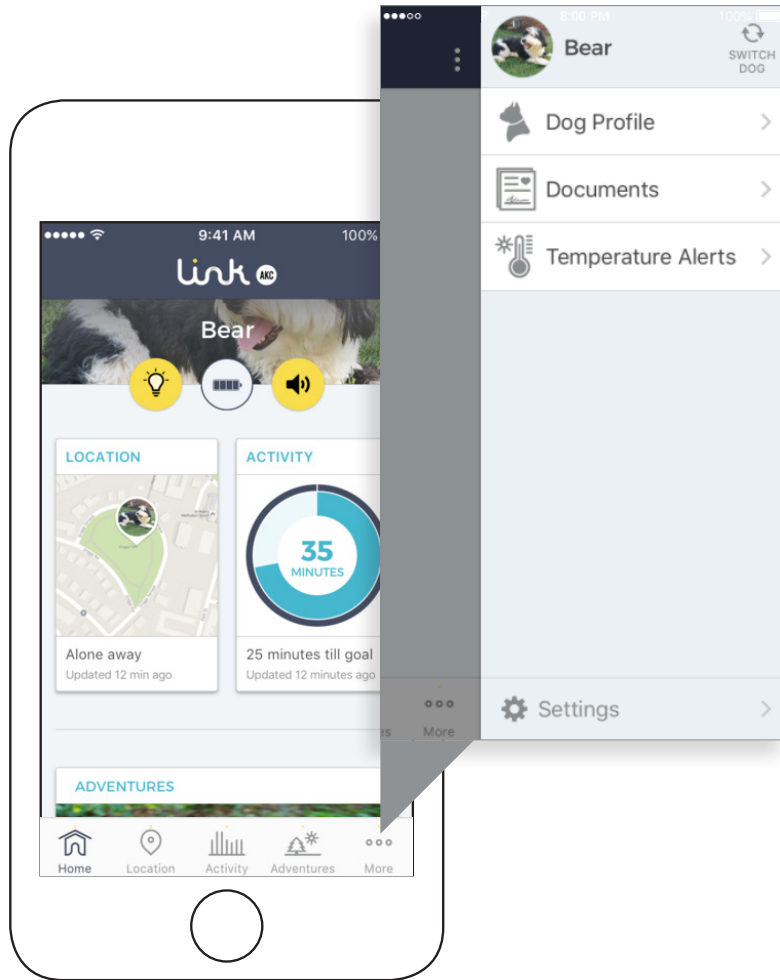

Share

Share your adventure with
friends and family

The app may ask you if it can access
your camera and sound so it can save
and record. Here at LINK AKC we never
sell or share your information.

More

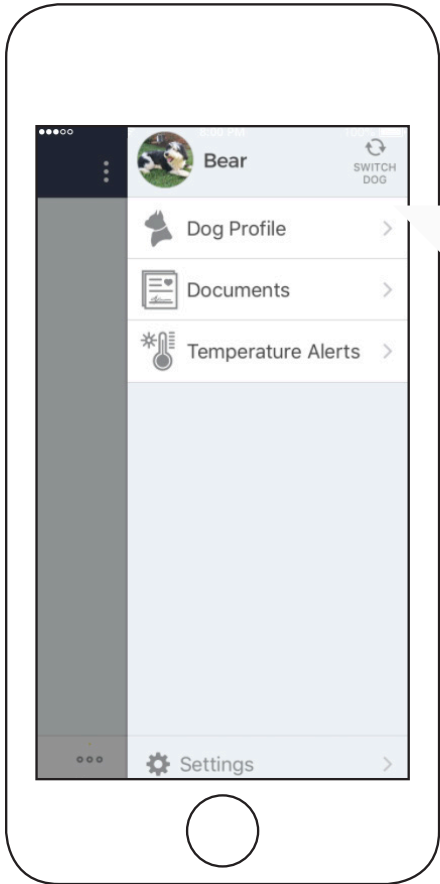

More, actually gives you a lot:

- Manage multiple dogs
- View/edit your dogs or your profile
- Save important documents
- Turn on temperature alerts

Settings:

- Add/remove owners or dogs
- Set up your Base Station(s)
- Adjust notifications
- Change your account
- Sign out

Create your dog profile to have a better customized experience!

Access your dogs profile as well as yours!

You'll also be able to edit the profile, transfer collars, receive collar details, and remove collar or profile.

Switch the alert toggle
on to be notified!

Why do I need to charge my collar before the first use?

The collar uses lithium ion batteries which are not allowed to be shipped fully charged, but perfectly safe for your furry friend.

How tight should the Collar be on my dog's neck?

The tracking Unit will stay in place on your Collar Carrier so the collar should fit snugly on your dogs neck. Just like most collars, you should be able to fit two fingers between your dog's neck and the collar.

How often should I charge my Tracking Unit?

GPS is battery-intensive, so we suggest charging your LINK AKC every night.

Why is there a service plan?

Service plans are required to communicate with the LINK AKC collar. It enables data to be transmitted from the Tracking Unit to a cellular network which allows you to use features such as the GPS, location & adventures, temperature, and much more.

What is a three-axis accelerometer?

Similar to a human wearable, the Tracking Unit knows when it's moving to keep a good track of your dogs activity levels.
